

HUSSAIN ALI

FULL-STACK & MOBILE DEVELOPER

+973 3657 0015 | Email | Aali, Bahrain | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Full-stack and mobile developer with a computer science degree from the University of Bahrain and project-based engineering at Reboot Coding Institute (01 Edu), including the Java Full-Stack and Mobile Development specializations. Builds applications in TypeScript (NestJS, Next.js), Java (Spring Boot, Angular) and Flutter, and ships them with automated tests, Docker and CI/CD.

EXPERIENCE

IT Intern, Software & Mobile Development / *Canvas Design Studio, Bahrain* — Jul 2026 – Aug 2026

- Worked with one teammate on a Flutter and Firebase on-demand booking app with customer, service-provider and admin roles.
- Planned delivery in phases, designed the Firestore data model, and wrote the project handover and ownership-transfer documentation.

PROJECTS

TaskFlow / *NestJS, Next.js, TypeScript, PostgreSQL, Prisma, Docker* — GitHub

- Built a work-item tracker with JWT authentication and Manager/Member roles enforced in server-side guards and database queries; modelled the workflow as one transition table with extension approvals and an activity log.
- Wrote Jest unit and Supertest end-to-end tests run by a GitHub Actions pipeline against PostgreSQL; documented the API with Swagger.

Sentra: AI SRE for Odoo / *Python, Odoo, PostgreSQL, Prometheus, Grafana, Docker* — GitHub

- Built a custom Odoo module monitored with Prometheus and Grafana, and an SRE agent that investigates alerts with read-only tools and proposes one allowlisted fix that runs only after a human approves it.
- Recorded every incident as a postmortem and an append-only audit log; covered the agent service with over 100 pytest tests.

Vault / *Flutter, Supabase, PostgreSQL, Firebase Cloud Messaging* — Live demo

- Contributed to a bilingual (Arabic/English) gaming and esports community app with tournaments, chat, a marketplace and push notifications. Built phone-OTP sign-in, the admin console, Swiss-system tournament screens and Arabic localisation; wrote Supabase migrations, row-level security policies and the Vercel deploy workflow.

Buy-01 / Buy-02 E-Commerce Platform / *Java, Spring Boot, Angular, Jenkins, SonarQube, Docker*

- Built an e-commerce platform as Spring Boot microservices with an Angular frontend: seller product management, validated media uploads, cart, orders and search; shipped through a Jenkins pipeline with automated tests and rollback, SonarQube quality gates and Nexus artifacts.

SooQna *(Senior Project)* / *Flutter, Dart, Supabase* — Live demo

- Built a marketplace for technology products designed around safer transactions, scam prevention and disputes over items that arrive damaged.

Localhost HTTP Server / *Rust, epoll, TCP*

- Implemented an HTTP/1.1 server from scratch with non-blocking I/O via epoll, multiple ports and virtual servers from a config file, CGI, file uploads, cookies and sessions.

Social Network / *Go, JavaScript, WebSockets, SQLite, Docker*

- Built a social network with followers, private profiles, groups, events, notifications and real-time chat over WebSockets; backend and frontend run in separate Docker containers.

Also built: Unix shell (Rust); multi-client TCP chat server (Go); Neo4flix recommendation engine (Spring Boot, Neo4j, OAuth 2.0); travel booking platform (microservices, Elasticsearch, Ansible); multi-role shop with PHPUnit tests (Laravel).

SKILLS

Languages: TypeScript, JavaScript, Java, Dart, Go, Rust, Python, PHP, SQL

Backend: NestJS, Node.js, Spring Boot, Laravel, Prisma, REST APIs, GraphQL, WebSockets, OAuth 2.0, JWT

Frontend & Mobile: React, Next.js, Angular, Tailwind CSS, Flutter, Firebase, Supabase

Data & DevOps: PostgreSQL, MySQL, MongoDB, Neo4j, SQLite, Elasticsearch, Docker, GitHub Actions, Jenkins, SonarQube, Nexus, Ansible, Prometheus, Grafana

Testing: Jest, Supertest, Vitest, PHPUnit, pytest

EDUCATION & TRAINING

B.S. in Computer Science / *University of Bahrain* — 2022 – 2026

Full-Stack Software Engineering Program / *Reboot Coding Institute (01 Edu)*

- Specializations: Java Full-Stack; Mobile Development (Flutter).
